We create digital worlds
Individual learning software and simulation systems

szenaris GmbH is your partner in conceptualising, implementing and supporting individual, innovative Internet based learning media in the arena of Computer Based Training (CBT), Web Based Training (WBT) including simulation and Virtual Worlds (VR). We offer e-learning programs and team training systems.

This form of learning enables location- and time-independent study of pre-defined client tasks. It allows individuals or team members to learn independently and at their own pace. These cost-efficient solutions will, in many cases, replace original systems.

As a well-established team, we bring together extensive competence to the implementation of instruction, training and simulation. New techniques are innovatively integrated into learning solutions for our customers. Collaboration with research associations provides us, and therefore you, with an incisive advantage. We will advise you on your project from start to finish and beyond. We'll always be available.

High security standards are, for us, an important instrument in the avoidance of IT-security problems. Our customers use a variety of techniques to avoid potential gaps in security and we fulfill these standards regardless of which technology you use.

Advantages for our customers:

- Training and ongoing development of employees
- High quality personnel training
- Shorter practical training
- Savings in cost and time

In the beginning of 2009, szenaris GmbH emerged from the "Training & Simulation" branch of Ray Sono AG, Munich. Our portfolio ranges from company-specific, organised learning programs through team training systems up to comprehensive training solutions.
